

Follow these 3 steps to add the **Wear Me** button to your website. If you are not sure, forward this guide to your web developer — they will have it done in under 5 minutes.

1 Find the main layout file for your website

Every website has one main file that wraps every page — it controls what appears at the top and bottom of the site.

This file is often called **layout.html**, **base.html**, **index.html**, or similar.

Ask your web developer if you are not sure which file it is.

Common file names to look for:	
layout.html or base.html	■ most common
index.html or default.html	■ also common
header.php or footer.php	■ PHP-based sites
Not sure? Ask your web developer — they will know straight away.	

2 Scroll to the bottom and find `</body>`

Open the layout file. Scroll all the way to the **very bottom**.

Near the end of the file you will see a line that says `</body>`.

You need to paste your Wear Me code just above this line.

What the bottom of the file looks like:	
...rest of the website...	
<code></body></code>	■ find this line near the bottom
<code></html></code>	

3 Paste your code just above `</body>` and save

Click just before the `</body>` line. Press Enter to create a new empty line above it.

Paste your Wear Me code on that new line.

Save the file and upload it to your server (or deploy as you normally would).

BEFORE (what the bottom of the file looks like)	
...rest of the file above...	
<code></body></code>	■ find this line near the very bottom

</html>	
AFTER (what it should look like once you paste)	
...rest of the file above...	
<script async src="https://fit-room.com/widget.js"	■ paste your code here — above </body>
data-fit-room-key="YOUR_KEY"></script>	
</body>	■ this line must stay here
</html>	

■ Once deployed, open any product page on your store. The Wear Me button should appear automatically on your product images.

Stuck at any point? Just reply to this email — we will sort it for you personally.
